REGULAR MEETING

I. Call meeting to order

II. Written Notes from Commission Chair

III. Reports

1. Recommendation re: PCC members from outside of city
2. Appointment of George Mazeika
3. Council goals
4. Recommendation about consulting Trails about trails
5. Interpretive signs -Tara DuBois

This meeting is open to the public and all interested persons are invited to attend. This meeting will be audio taped. All items to be considered by the Commission must be submitted to City Hall no later than one week prior to the meeting. Minutes of all public meetings are available for review at City Hall, or on the City website at www.yachatsoregon.org.

In accordance with ORS 192.630, City of Yachats will make a good faith effort to provide accommodations for any person desiring to attend a public meeting, if the request is made at least 48 hours in advance of the meeting time. The meeting room is physically accessible to persons with mobility devices; a sign language or foreign language interpreter may be available, with advance notice.

Call City Hall at 541-547-3565 or Oregon Relay 1-800-735-2900 (TDD) two days in advance.

Posted: 2/23/2021

6. Boardwalk engineering request \$50k
7. Request to Budget Committee for FY21-22 for work on front of Commons

IV. Ongoing Business

1. Open Commons Space
2. Oceanview Drive
3. Gathering community input re: Commons
4. Newsletter Article for April

V. New Business

- a. Update Parks and Open Space Master Plan to include Prospect, Peace, Marine Dr.

VI. Commons Other Business

- a. From Commissioners
- b. From Staff
- c. From Audience
- d. For the next agenda

VII. From Floor: Topics not listed on the agenda: 5-minute limitation per person

Next regular meeting: Tuesday, April 6, 2021, at 2:00 pm via ZOOM
Commission meets the first Tuesday of each month

This meeting is open to the public and all interested persons are invited to attend. This meeting will be audio taped. All items to be considered by the Commission must be submitted to City Hall no later than one week prior to the meeting. Minutes of all public meetings are available for review at City Hall, or on the City website at www.yachatsoregon.org.

In accordance with ORS 192.630, City of Yachats will make a good faith effort to provide accommodations for any person desiring to attend a public meeting, if the request is made at least 48 hours in advance of the meeting time. The meeting room is physically accessible to persons with mobility devices; a sign language or foreign language interpreter may be available, with advance notice. Call City Hall at 541-547-3565 or Oregon Relay 1-800-735-2900 (TDD) two days in advance.

City of Yachats

Parks and Commons Commission Work Session

February 2, 2021 - 2:00 p.m.

I. Call to Order

Chair Dawn Keller called this Work Session to order on February 2, 2021 at 2:00 p.m. Commissioners present were Linda Johnson, Dean Shrock, Dawn Keller, Michael Hempen, Craig Berdie & Scott Gordon. Also present were Deputy Recorder Kimmie Jackson and from the Trails Committee, Joanne Kittel.

The first half of this work session is missing from the posted recording but here is a brief synopsis:

II. Request for Help with Signage from Cape Perpetua Area Collaborative

The Cape Perpetua Collaborative is asking to place additional interpretive signs in Yachats, two of which would be on city property. Members of the Trails Committee were asked to do work with Tara DuBois to determine options for sign placement and to produce a map showing the suggested locations. This item will be placed on the agenda for the February 18 meeting for report and possible recommendation to the City Council.

III. Discussion about Safe Reopening

Because of repeated requests from community members to be allowed back in the Commons building for classes and other use, Chair Keller asked the Commissioners to review some OSHA guidelines for reopening venues which show the complexity of reopening a multi-level use building. The Commissioners agreed that we will need direction from the City Manager about when and how to open the Commons safely.

The following part of this work session is included in the posted recording:

IV. Applicant(s) for the Open Parks & Commons Commission Seat

There was discussion regarding the procedures, process, and timing of accepting applications as well as conducting interviews of the applicants. After some give and take, the commissioners by consensus decided to interview for this position at its February 18, 2021 meeting. At this time, only one applicant - **George Mazeika** - has applied. Deputy Recorder Jackson said that she would forward all applications to commission members prior to its regular meeting on February 18th.

V. Proposed Plan(s) for the Commons Green Area

Commissioners Berdie and Shrock presented a draft proposal for a staged design of the open green field close to the Commons. They made it known that this is **a preliminary plan** ("nothing writ in stone") and is offered for commission study and, eventually, for community input. Discussion as to how to elicit ideas from the public as well as economic considerations,

applying for grants, priorities, and future upkeep and maintenance was held. As an initial step, it was decided that commission members would rank order (using percentages) their priorities of what they would like to see in this area.

City of Yachats

Parks and Commons Commission Meeting Feb 18, 2021 2:00p.m.

Call to Order

Chair Dawn Keller called to order the February 18, 2021 meeting of the Parks and Commons Commission at 2:00 p.m. on Zoom. Members present were: Linda Johnson, Dean Shrock, Craig Berdie, Dawn Keller, & Michael Hempen. From the Trails Committee were: Joanne Kittel & Bob Langley. From the City Office were: Kimmie Jackson & Heather Hoen. And from Finance, Don Groth.

Reports & Items for Discussion and Decisions

Facilities Manager Hoen gave an update on the painting colors/estimates, the possibility of getting dimmer switches for the Commons, and the current state of purchasing the dishwasher including what size, price, etc. There was discussion about whom to consult for further information. Ms. Hoen also mentioned that she had not received a response from the county pertaining to the possibility of having a basement apartment in the Commons.

Joanne Kittel and Bob Langley then gave an update on the upkeep of trails which traversed both public and private lands. The Trails Committee requested that it be informed of and consulted on anything related to the town's trails (and parks) - planning, development, implementation, & maintenance. *A motion to this effect was passed unanimously by the Commission and was sent to the City Council for approval.*

The Trails Committee also requested that it be empowered to manage its own financial obligations within the guidelines set by the annual budget (as was done previously) and that requisitions be given to Ms. Hoen who would serve as liaison between the Trails Committee and the Finance Committee. The Trails Committee also requested that it have autonomy in terms of scheduling work sessions following, of course, guidelines pertaining to the covid pandemic. (These requests were acceptable to the Commission.)

The Trails Committee also requested that the Commission "endorse, recommend, and champion" the Trails Committee in regard to its work on the 57 meter boardwalk on Oceanview Drive. There was considerable discussion r/t engineering, cost, process, and construction of this project. *It was moved to request that the City Council approve the process of soliciting engineering and design bids for the Oceanview Boardwalk Project using existing budgeted funds (\$50,000) with the purpose of eventually selecting a vendor for said project. The motion passed unanimously and was sent to the City Council for approval.*

Finally, there was discussion r/t replacing rotting/rotten sections of the existing boardwalk in the wetlands area. Ms. Hoen was tasked with finding out who is responsible for this section of infrastructure.

Tara DuBois from the Cape Perpetua Collaborative gave a report on the interpretive signs that were being designed and created for placement in specific locales in the area (generally along established trails). She spoke of the size, content, and placement of such signs; the Trails Committee pledged to continue to assist Ms. DuBois with these interpretive signs. *It was moved to seek approval from the City Council for the placement of these interpretive signs (as designated on the provided map). The motion passed unanimously and was sent to the City Council for approval.*

Wally Orchard (in a previous request) asked that four houses be allowed to be placed in the wetlands park for nesting swallows. *The motion was moved and passed unanimously to allow this project to move forward.*

New Commission Member

George Mazeika's application was accepted and he was interviewed by Commission members for the vacant Commission position. *It was moved that George Mazeika be recommended to the City Council for the appointment to the open Commission seat. This motion was also passed unanimously and sent to the City Council.*

Feedback & Discussion on the Craig Berdie Proposal for the Open Commons Space.

There was considerable discussion r/t how to move this proposal/project forward. Internal discussion among the commissioners centered around what functions, projects, structures, process, etc. would be desirable in reference to this project. Commissioner Berdie requested that his fellow commissioners submit written suggestions (with rank order percentages) to him to be collected and collated. There was also discussion about the possibility of seeking professional polling/survey assistance in terms of garnering the community's preferences. (Additionally, there was brief discussion about another survey which may be requested in the future pertaining to the possible uses of the Commons.)

Discussion, discussion, discussion...

It was generally accepted that Commissioner Berdie would gather written material from the commissioners, compile the data, and that further information from the Yachats community be collected based on that initial data and the ensuing Commission discussion.

Additional Comments & Odds 'n' Ends

Chair Keller mentioned that she would be writing a brief monthly newsletter article highlighting things the Commission is working on. She stated that if and when needed, the newsletter could be a means of requesting information from the public in regards to future Commission projects.

Commissioner Hempen reported on his and Commissioner Johnson's work on the projects pertaining to the outside of the Commons. He requested funds (\$25,000?) to help begin both natural (arboreal) and construction improvements and said that as work progressed, additional funds will be applied for (also with the assistance from grants).

After a brief discussion revolving around the State Park, the meeting adjourned at approximately 4:20 p.m.

TRAILS COMMITTEE REPORT – Parks and Commons – March 4, 2021

Work sessions – We had good attendance at the last covid-safe Trails and YIPS! sessions.

Signage project – The four map/interpretive signs have arrived and look great; the hardware will arrive later this month. We are working with Yachats Public Works Department and are on their work schedule as they will do the actual installation.

Ya'Xaik Trail – User counts vary from a low of 5/day (average) for a week to a high of 44/day (average) for a week. It works out to an average of 18/day over a six month period which includes much of the current winter season. Use of this trail seems higher on weekends and holidays suggesting, perhaps, increased visitor use at that time.

Boardwalk project – After the request to the City Council that the PCC made at its the last meeting and with the knowledge that \$50,000 is set aside for this purpose in the current year's budget, Commissioner Hempen and Bob have met with Heather who has agreed to start the process of requesting proposals for design, engineering, and construction of a boardwalk. Mike and Bob will be compiling a binder with information about the history of this project to date as well as some suggestions of companies from which to solicit bids.

Aqua Vista Loop Trail – The S access trail from the road to the bluff is very muddy and slippery during rainy parts of the year. Joanne has written and submitted a grant to OPFF = Oregon Parks Foundation Fund to cover part of the cost of materials and equipment rental to grade and place gravel on the tread surface; the balance will be taken from the Trails Committee budget for this year. It will be a substantial project with tangible benefits and the work will be done by a group of volunteers. (see attached sheets)

In the event that the grant is not funded, we will be requesting that the PCC ask that the City advance funding for this project so that it can happen no matter what.

City of Yachats

PARKS & OPEN SPACES MASTER PLAN

Revised December 2017

Preface

The Yachats Parks & Open Space Master Plan provides descriptions and plans for existing public parks within the Yachats city limits and urban growth boundary, as well as describing the potential expansion of public open space within the Yachats area. The first section of the Master Plan includes site specific park descriptions and plans for existing parks. The second section identifies potential public open spaces to be acquired in the future.

I. Existing Parks

City Parks

Yachats Community Park

The *Yachats Community Park General Plan* (enclosed) was completed in 2011. The community park plan includes a General Plan Summary, Community Involvement Process, Site and Settings, Existing Features, and planned New Features.

Whale Park

Whale Park, home of the spouting whale sculpture, is a small “pocket” park, located on the east side of Hwy 101, south of the highway intersection with Prospect Avenue.

State Parks

Yachats is home to three Oregon State Parks. In 2017, the Oregon Parks and Recreation Department completed a Master Plan for the South Beach Management Unit, which includes the three parks located in Yachats. Descriptions and planned improvements are provided for each park and included in this Master Plan.

Smelt Sands State Recreation Site

Yachats State Recreation Area

Yachats Ocean Road State Natural Site

II. Potential Expansion of Public Open Spaces

The Yachats Parks Master Plan identifies potential public open spaces. These sites are identified as potential public open spaces because of significant natural resources, natural beauty, and protection values that will benefit the greater Yachats community, but they are currently under private ownership. Successful cooperation and negotiations are required between the property owners and the City in order to secure these sites as public open spaces.

Evans-Betz Property

Southeast Viewshed

East Hillside Watershed

Other open spaces not identified in this Master Plan may be identified in the future as having significant value as public open space.

Note: This Yachats Park Master Plan does not include public trails. The Yachats area hosts a comprehensive public trails system that is a significant amenity to the Yachats community. There has been outstanding volunteerism in identifying, developing and maintaining the trail system throughout the Yachats area. Yachats trails maps are available to the public. The Yachats Trails Committee and others continue to improve upon this public amenity.

—John Muir

plan SUMMARY

In 2004 the Yachats Park Advisory Board and City Council commissioned a Master Plan of the Commons environs. Since then, groups have petitioned to install, renovate or “landscape” portions of the property to support their activities. In 2010, in an effort to guide these activities, the City Planner, Public Works Director and several local Landscape Architects reviewed the existing plan in detail. Consensus revealed the 2004 Plan still reflects a clear and appropriate direction to support the City’s varied interests

and vision. Unfortunately, however, the 2004 plan did not include all of the city-owned property contiguous to the site. In addition, several new initiatives have been identified since 2004. Lastly, very limited detailed design was prepared to guide improvements.

Participation

This 2011 General Plan has been prepared with the guidance of the Mayor, the Parks and Commons Commission, Public Works, Council, Planning Staff, the Library, YYFAP, and stakeholders from

plan SUMMARY

current programs, adjacent business and resident neighbors. In addition, a thorough review of previous park plans and the recent Comprehensive Plan contributed to the research. The final plan will be presented to the public for comment.

New Requirements

This plan update utilized the 2004 Plan and incorporated several important changes which have occurred since that time.

The recent YYFAP building addition, playground expansion and increased public activities, parking and pedestrian uses are included.

Purpose and Philosophy

The Plan aims to guide location and organization of functions and activities related to city facilities and citizen desires in a public park. The plan maintains continuity while accommodating multi-use utility of the property. The plan protects and preserves the site's natural features, and pedestrian and vehicular safety. The plan indicates size, shape and dimension of current and future park components. Care was taken to ensure spatial relationships between park activities are safe and mutually comfortable.

While currently a 'village' park in scale, stakeholders made every attempt to

view-the-future to determine appropriate capacity of activities to ensure future growth. As expected, all ideas and activities could not be accommodated. The plan reflects a balance of maintaining current uses while carefully protecting and preserving the site's special natural features and quiet demeanor.

The New 'General' Plan

A 'General Plan' by definition recognizes the plan is a tool to comprehend budgets, use and maintenance of the grounds and provides a general perspective of the future. This plan provides an important tool for City Staff and Parks and Commons Commission to evaluate improvements based on capacity and compatibility.

New features in this plan are viewed as 'sub-projects' anticipating prioritization, funding and implementation typically occurring over time. It is recognized general plans may adapt, change and be refined over the course of implementation as preferences, budgets and priorities evolve. Adequate detail is provided in this plan to serve as a starting point to identify parameters on-the-ground and a relative scale of new initiatives. As each sub-project is initiated this plan can quickly identify potential impacts or advantages. In addition, the plan will help illustrate when additional detailed construction design is required.

**The plan balances
current use while
carefully protecting
and preserving the site's
special features.**

History and Inventory of Ideas

In keeping with the City Council's Goal Statement, the Mayor requested all city stakeholders gather current ideas and long-term plans for their facilities, including the Library, Public Works and the Parks and Commons Commission. Additional participants included groups and organizations that frequently use the property, and adjacent commercial and residential neighbors. YYFAP, Trails Committee, Adult Facilities Task Force, and Sunday Market representatives contributed insight and needs.

In addition to the City Planner and Public Works Director, a meeting with ODOT was conducted to understand vehicle traffic. Previous councilors, city staff and the Code Compliance Officer contributed institutional memories, historical context and perspective. Base data was then compiled using a CADD format to facilitate changes, new ideas, drafts and facilitate future construction documentation.

Stakeholders Input

In addition to city entities and service organizations, it was critical to secure participation from current user groups, adjacent private homes and businesses. Representatives of quasi-public stakeholders like the adjacent churches, service organizations, Sunday Market, YYFAP and Trails Committee were elicited for input.

Workshop #1

This hands-on design workshop was conducted in the Commons. Stakehold-

ers were invited to represent their future plans and current ideas, issues or constraints.

Preliminary Plan

Workshop #1 results were synthesized and contributed to preparation of a preliminary plan. Several options for "tough spots" or overlapping interests were included. Technical discussions with the Parks and Commons Commission, city staff and program stakeholders minimized conflicts. Parking and pedestrian needs were refined. Various expansion plans for the 'multi-use' portions of the property were incorporated.

Workshop #2

A second meeting was conducted with the stakeholders and city staff with a presentation of the Preliminary Plan, including discussion of options and alternatives.

Community Meeting

The Preliminary Plan was presented during a public 'state-of-the-city' meeting and included discussion of new features, options and alternatives.

Preliminary Plan Revisions

Based on review and comment from Workshop #2 and the Community Meeting, the Preliminary Plan was revised to incorporate new ideas and prepare a Final Plan.

Final Plan Review and Revisions

Based on comments during the public, formal presentation to the Parks and Commons Commission final changes and adjustments were incorporated into the plan.

Site and Settings

The property is unique as the grounds are situated central to the business and residential core of the village. Thus the Community Park has special value in its ability to physically connect citizens with the entire city property in a pedestrian accessible campus-like setting. Yachats is a village with an allure and enchantment defined by its place at the edge of the Pacific Ocean. It is exceptional and rare that each of the municipal facilities: Commons building, City Hall, Public Works and Library are all connected by a single park with ocean frontage.

Topographic information indicates the property slopes generally away from Highway 101 toward the west. The site includes many important small slopes that drain the property east-to-west and gather in ponds and wetlands forming a drainage running from south to north. The site then rises gently to the western boundary opening through the undeveloped 5th street right-of-way to a dramatic and grand vista of the ocean.

Unique to the property is the geographic integrity of three distinct landscape types. For its relatively small size the property includes a Sitka Spruce forest, an extensive, spring, stream, pond and wetland system and an open grass meadow. Over time each of these has experienced different levels of use, restoration, management and care. Each landscape has unique opportunities for citizen participation and education including ecology or habitat interpretation and local lessons of cultural history. As significant, these simple park settings serve as important places for picnics or reflection.

Eastern Edge and Commons Property

The eastern frontage of the Community Park faces Hwy 101 and serves as the primary eastern entry

to the property. A great portion of the eastern half of the site is developed with the Common's building, staff and visitor parking areas. While serving as the City's main public entry, there is sidewalk pedestrian access to administrative offices and Common's events.

The Commons' grounds are landscaped in a park-like woodsy or 'natural' appearance, with mature shore pine over-story and trimmed salal and mowed lawn ground surface. The eastern façade has a foundation planting of mature, perennial flowering rhododendron.

The western façade is less finished having utility access, staff stairways and entries. The western grounds include fenced children's play areas with traditional swinging and climbing equipment with soft surfaces of tree bark mulch. The grounds also include undefined hard surfaces for hop-scotch, basketball, skate boarding and covered Picnic Shelter. As a transition from formal gatherings and activities to natural areas, a wood crafted shade arbor and simple fence barriers protect pedestrians from vehicle traffic. An adjacent grass meadow playfield provides a setting for informal field sports, dog runs and summer picnics.

Northern Edge and Municipal Facilities

To the northeast, the West Coast bank building, two churches and their parking lots abut the property. A concrete wall, access lane and short-term public RV parking separate the park's playfield and meadow from the bank property. The bank's drive-through access and client parking share the northeastern boundary along the Fifth Street right-of-way. While largely undefined, the Fifth Street entry is an important partial through-street as it also accommodates a portion of the Common's visitor parking, YYFAP access and daily or event drop-off and loading.

existing FEATURES

Access and Edges

The northern boundary includes the Library and Public Works facilities along Seventh Street. The Public Works facility and equipment yard is enclosed for security and is directly adjacent to the west by the Library. This location includes an important pedestrian path providing northern access from Seventh Street and the adjacent neighborhood to the core of the community park via what is commonly called the "Library Trail."

Southern Edge and Adjacent Neighbors

The southern property edge is defined by Fourth Street and includes several businesses, the Lions Club, and a residential neighborhood. Fourth Street includes parallel public parking in the right-of-way, vehicular access to the Commons, parking for city staff and YYFAP, and back entry to the city administrative offices.

Along Fourth Street, several pedestrian trails lead into the site. One is a main access from Fourth Street to the children's play area and Picnic Shelter. Several steps further west, a second trail provides access to the boardwalk and wetland interpretive network. A third access leads into the woods from the street edge and collects into the Library Trail, a primary path leading north through the spruce forest to the library.

**It is exceptional and rare
that all municipal entities
are connected by a single
park with ocean frontage.**

Western Edge and Connection to the Sea

The western half of the site is virtually undeveloped and contains the considerable wetland areas, both native and restored, and a stand of Sitka spruce. The western boundary is largely a mature spruce forest which directly abuts backyards of several private residences. About midway along the property, the currently undeveloped City's Fifth and Sixth street rights-of-way provide opportunities for direct pedestrian access points to the oceanfront along Yachats Ocean Drive.

existing FEATURES

Preservation of Landscapes

It is rare and unique that a city park in the middle of town includes a Sitka spruce forest, a wetland and a grass meadow — and all within a block of the Pacific Ocean. Three distinct landscape types provide special opportunities for education and interpretation. The plan establishes protection of the pond and marsh system, forest and open-field landscapes for future generations.

Wetlands, Ponds and Marshes

The wealth of ponds, perennial streams and vegetation have been established and recognized as state certified wetland habitat. The plan attempts to provide exposure and interpretive opportunity to the wetland areas by trails and elevated boardwalks. The water source for the wetlands must be protected and regulated as necessary. The primary source of water for the wetlands is an outlet coming from the eastern developed parts of the park. When future improvements are necessary, the least impact designs should be employed.

East of the boardwalk and north of the large spruce tree is marsh land and seasonally pooling water. This pond and marsh is a special point of interest along the boardwalk. Several areas may require removal of invasive species to keep it open for viewing. Willow shrubs and trees adjacent to the wetlands and ponds should receive selective pruning to remove limbs and to control sucker growth. These shrubby trees serve as a transitional buffer to the wetlands.

Forest

The spruce grove is a specially-regarded area. The setting keeps this portion of the site quiet while it offers a unique opportunity in close proximity to town and accessible paths to interpret the majestic Sitka spruce. A light thinning of understory plants along the southern street edge will allow vision into the grove for security and provide a comfortable invitation to pass through the grove.

Meadow

While simply a ballfield to casual passers-by, this open grass field serves as a unique coastal meadow to plants and fauna. During quiet sunrise and sunset several deer, rabbits and meadowlarks call this home. In addition, its western edge brings users to the edge of the north pond and wetland for some special view and interpretive opportunities.

Trails and Paths

Trails provide a pervasive pedestrian-friendly attitude embraced by the community. The Park's internal pedestrian linkage functions as an extension of the community trail system. Paths and trails are popular and valuable to the community. The park can serve as a nucleus for the extensive local and regional systems that reveal natural, historic and cultural resources. Paths are directly connected to the popular and historic 804 trail along the beach frontage and the sidewalks that serve as corridors for main-street Highway 101 to the rest of the community. With current path locations, considerable effort has been made to introduce interesting natural site features along the way, including the large spruce trees and the wetlands. This combination of elevated and gravel paths provide a pattern of pedestrian trails throughout the undeveloped portions of the site. The paths serve movement from one place to another within the site as well as important connections for those passing through. In addition to pedestrians, it is recommended that bicycle circulation and locking facilities be incorporated during each of the future detail design discussions.

**The Park's internal
pedestrian linkage
is an extension of the
community trail system.**

Play Areas

For planning purposes, children's activities can be subdivided into three distinct groups: Tots (3-6), Youth (6-12) and Teens (13 and older). These are approximations as actual development varies among children. In addition, an increasingly important component to the Yachats population is the physical fitness and recreational activity of adults.

Tots and Youth

Developed dry surface play areas are provided adjacent to the Commons serve hop-scotch, jump rope, four-square and tether ball. A tradi-

tionally equipped playground area is soft surfaced and provides swings and slides. In each of these areas, subdivisions of low hedges and short fences help to manage the activities. Each of the sub-areas can be opened or gated to accommodate children's activities. The new treehouse structure is located in the soft surface play area adjacent to and under the limbs of existing spruce trees. A raised garden has been built as part of the soft surface play area integration with the picnic shelter.

Teens

A skate park has been included north of the picnic shelter to serve the needs of local riders. The scale has been designed large enough to offer a sampling of tricks and specialized equipment but will not be considered a full-scale facility to support skate events and professionals. The grass ballfield provides for teen and adult stick-and-ball games and open field sports.

Adults

In addition to traditional field sports used by children and adults, the open field also accommodates fairs, festivals and overflow parking for community

events. The horseshoe pit has been moved to this location. The new loop 'fitness' trail is designed at a 1/4th mile distance to assist in determining distances for prescribed therapy and healing exercises. The loop includes stations or specific points along the route to place adult fitness equipment specifically designed for outdoor use. It will be important to be creative with the selection of equipment and to ensure the colors and materials have been reviewed for compatibility with the setting.

Picnic Shelter

The structure is envisioned to accommodate a series of seasonal activities by providing outdoor shelter from rain and prevailing wind. This structure has recently been renovated to improve weather control; particularly wind and rain abatement. While the addition of rolling doors will complete the work, the building has not yet reached its potential to serve tot, youth, teen or adult activities. The increased weather protection and night lighting is projected to increase demand for this space from youth programs, adult activities and the summer Sunday Market.

existing FEATURES

**To maintain the
pedestrian experience,
parking is accommodated
at the property perimeters.**

Vehicle Access, Parking and Bicycles

In an effort to maintain the pedestrian experience and campus-like nature of the park, vehicular parking and access are accommodated at the perimeters of the property.

The existing city parking lot on the west side of the Commons building has been redesigned. The limited on-site parking is meant to serve city staff, teachers and program personnel. Most of the adjacent city rights-of-way and side streets have been shown to formalize additional spaces providing additional diagonal or parallel on-street parking.

This street edge designs include specific rows of small hardy deciduous trees to provide required car separation from the park's activities and direct pedestrians to entry points.

A loading and drop off zone directly along Hwy 101 at the east entry court guides pedestrian movement to the administration offices. These spaces will serve short-term pick-up and drop-off guests. New pick-up points at the north and south of the Commons building for youth programs will reduce the need for cars to enter the parking lot and reduce backing and turning motions. Emergency, ADA and service vehicle access are still able to circulate the Common's perimeter, however, a reduction in private vehicles directly around the common's doors and entries would improve safety of pedestrians.

Improvements to the meadow and sports field area has been discussed to serve as infrequent event parking. With minor grading, leveling and an application of over-seed, the grass field would be suitable to accommodate temporary vehicle parking. In addition to vehicles and pedestrians, local bicycle use is embraced and encouraged. There are many opportunities to improve and support the use of bikes. As part of this plan, it is recommended that bicycle circulation and locking accommodations are incorporated during each detailed design phase. Incorporating bike racks and bike specific needs for travel paths should be considered an important component during the design discussions for future site specific improvements.

new FEATURES

Pedestrian Way-finding Entries & Expectations

Yachats residents and visitors have a keen interest in walking paths and trails. This plan introduces an important set of designated entry courts that relate to compass points north, south, east and west. These entries will serve to welcome park visitors and encourage exploration.

Current access to the park's pathways from the north, west and south have no discernible markings. Unless curiosity or word-of-mouth prevails, entry from these directions and access to the wealth of public natural resources is limited. These entry courts will set visitor expectations including a brief guide to the park features and interpretive information for care of the sensitive landscapes. A quality treatment at each point of entry is important to set the tone for the park.

The plan features an outer loop trail linking the entry courts with the three important landscapes: forest, wetlands and meadow. The loop would be a simple gravel trail designed as a ¼ mile fitness path that will feature interpretive opportunities and a series of places to pause for exercise. All entry courts will be connected by the loop while passing through forest, meadow and wetlands, and also works to discourage shortcuts through sensitive areas.

Eastern Entry

This main entry includes a formal, ADA accessible courtyard with annual flower plantings, the US flag, several seating

benches and sculpture. These features complement the building's architecture to identify the public nature of the facility. The proximity to Hwy 101 provides a strong location for the village marquee announcing events and activities. The size and feel of this court creates a strong precedent to illustrate the design and scale of south, west and north access points.

South Entry

An existing soft path through the spruce grove can now be accessed from Fourth Street. An additional access to the boardwalk is located several steps to the east. A special opportunity exists to create a welcome point at this intersection of two major paths: the library trail and the wetlands boardwalk. The library trail through the forest is now a narrow path winding around and through the trees. This character of experience is to be maintained to the extent possible. This consolidated entry would also help guide a walker's experience and present information regarding the plants and water resources in view.

North Entry

Primary access from the north to the boardwalk and library trail occurs at Seventh Street and could become a very significant entry court for the library and park. Given the significance of the wetland and forest landscapes, interpretive information at this location is critical. An attractive and unique entry to welcome guests and indicate directions to the community center and playgrounds would be of great value. Information describing special features of the natural

areas experienced along the path would be appropriate. Artwork and an evergreen screen could be planted along the fence to mitigate views and noise from the Public Works facility on the east side of the drainage.

West Entry

A new soft trail connecting the beach to the outer loop path is a spectacular opportunity for a western entry court. Located about mid-point of the library trail, the west entry court is located off the city's Fifth Street right-of-way. Edges of this corridor can be planted in dense native plant material to provide screening for the adjacent residences. Special plantings can be selected with regard to ocean-front conditions and coastal climates as a prelude to natural zones throughout the park.

These compass point entries will serve to welcome park visitors and encourage exploration.

Interpretation and Signs

There are numerous opportunities to introduce or supplement signs throughout the park. Pedestrian and weather-durable plaques, markers or sign-boards can help to optimize the experience at several strategic locations. As a component to each entry court a simple marker can welcome guests while explaining the ecology, natural systems and a brief introduction of flora and fauna. While the specific details for size, style, placement and message content has not been determined by this plan, it will be important to recognize a balance is necessary. Too many signs of a different vocabulary can be less successful than several well-designed markers.

Viewpoints

Special viewpoints are critical to establish, inform and align the visitor experience. Views are typically categorized in terms of human preferences as 'prospect' or 'refuge.' Prospect views are those enjoyed from exposed high points overlooking great distances and taking in a variety of landscape types. Refuge views are those located in the forest or small clearings where the viewer is protected and the views are foreground, providing details of significant plants, water features or geology.

Most of the current park is enjoyed from ground-level and fore-to-middle ground in depth. Several opportunities exist to relocate the viewer and heighten the experience. At several locations, vista across the ponds or across the meadow will be enhanced by careful strategic pruning and management of understory shrubs and small trees. The forest experience can be improved with the use of an elevated platform to experience the trees from a higher position. The plan includes access to an existing prominent landing high atop the water treatment plant. This will offer long distance views of the surrounding mountains and coast without leaving the property. A trail extension of the western Fifth Street right-of-way will place visitors directly overlooking the bluff, beach and Pacific Ocean.

Site Architecture and Furnishings

It is critical that a format, or palette, of materials and design is carefully selected to embrace the precedent of the existing east entry court and, for continuity; this format should be repeated throughout the park.

**It is critical that a format
of materials and design
is carefully selected to
embrace the precedent
of continuity.**

Numerous locations for benches, interpretive signs and arbors are noted on the plan. Primarily located at the entry courts, these locations will require special detailed design prior to construction. As the plan illustrates, the entry courts provide opportunity to integrate the welcoming component with seating, signs or sculpture, along with a selection of plant materials and arbor.

Arbors, fences, bench designs are examples of structural furnishings that should maintain a theme of materials, colors and textures. While special locations merit signs using color, creativity and sculpture, a majority of the benches, tables, and bike racks should be of a sturdy and handsome design.

It cannot be overstated: new construction or additional furnishings should be selected from a palette of materials reflecting the vocabulary of the existing entry court and the existing arbor and fences.

Restrooms

The park is uniquely supported by restroom facilities inside the Commons building. The building is open during the day and after-school programs use the building late in the day. The restroom facilities can be made available for special events and the outdoor park facilities by special arrangement. With some modification, the indoor restroom could be made more available during times when the building is not staffed.

Landscape Treatments

To enhance or support native vegetation, landscape buffers and screen planting areas are shown on many areas of the plan. Much of this material is placed for functional reasons and specifically defined palette of species should be selected for all uses. While a particular list of species has not been established by this plan, it is critical those choices are of native and coastal varieties. Several primary landscape needs are as follows:

1. **Evergreen and Flowering Screening and Buffering plants**
locations: adjacent to parking, separation of fields and skate park uses, along and surrounding the water treatment plant.
2. **Deciduous Shade, Over-story trees, and Perennial Vines**
locations: entry courts, street edge along/in front of the water treatment plant, walks and path definition.
3. **Evergreen Hedges**
locations: defining soft / hard surface play areas.
4. **Annual Flowering and/or Hanging baskets, Potted plants**
locations: Commons, Public Works and Library entries.

In an effort to introduce a sense of continuity for city facilities, areas along the front of each City building should be enhanced with quality annual plantings chosen from the same palette of materials, pots and colors. Over time new plantings should be similar to the city entrance signs located north and south of town. In addition, a continuation of this effort should include plants and pots located at key civic locations and crossing points along the Hwy 101 corridor.

Buildings Expansion

Several of the municipal structures anticipate expansion in the future. This plan provides an opportunity to inform designers of those projects about the expectations and desired conditions surrounding each facility. This plan becomes a guiding tool to preserve the continuity of the site and grounds and a mechanism to evaluate the impacts, prior to each new addition.

As with the site architecture, it is critical that during any expansion, renovation or even routine maintenance like exterior painting, the color palette, materials and design is carefully selected to embrace the precedent of the existing new Common's building. To maintain an increased quality of civic pride and continuity, attention to the city's building's exterior colors and style should be repeated throughout the park.

The Commons

There is anticipated re-configuration of the Mayor and staff's administration offices. While this is an interior space project, influences to the building's entries and parking have been included in this plan. New parking configurations and access from both the public eastern entry and the staff, western entry as shown.

YYFAP

The youth program facilities have commissioned a substantial remodel and expansion. Those plans have been included on this plan and inform the layout of loading and parking, pedestrian access,

safety and emergency access. Anticipated youth program uses and state regulated size and configuration of exterior spaces have been allocated. This plan provides a guide to development and evaluation of the refinements required to complete the YYFAP facility.

Library

The library has projected to need additional space including storage. For this plan and additional book storage annex was illustrated to work within the site constraints and the existing building. The plan also includes a conceptual design for a desired labyrinth and outdoor garden space. During any process of designing expansion to this facility it will be important to ensure the public access and trail shown to begin at the Library Entry Court is accommodated.

**This plan becomes
a guiding tool to preserve
the continuity of the site
and grounds.**

Public Works

The north edge of the facility has been enhanced with street tree plantings, under-story plantings and an appropriate site sign. Each side of the perimeter fence has been shown with additional plantings to screen or enhance views. Plantings along the east side, screening views of the plant from the adjacent church exist but could be enhanced. Taller and evergreen materials would improve screening. Coordination with the church is encouraged. Diagonal, nose-in parking for staff and guests has been formalized along 7th street. These additional spaces provide assistance to the Library needs. The public works facility anticipates working with the community to provide space and configuration for a public organic materials recycling effort. Access to the equipment yard provides assistance for gathering and storage of materials.

Special Spaces

Several plan features are included and specifically designed to accommodate special events and functions. Some activities requiring permanent space are of a seasonal nature or occur only periodically yet provide much-needed settings for infrequent ceremony and civic events. These spaces are designed to carefully embrace the users anticipated while recognizing their proximity to adjacent park functions. It was recognized that these spaces are often utilized by only a sub-group of the community. They were, however, determined important enough to justify a permanent location within the public's park.

Library Labyrinth Garden

The plantings are shown to accommodate a quiet reflective space adjacent to the existing building. The design is schematic for this level of planning but illustrates an accurate size and configuration to compliment the existing structure and pedestrians. As typical for a labyrinth, the garden is shown to be hedged to fit the confined space and to signify entrance into the building while preserving the passers-by pedestrian traffic into the entire park. The plant materials selected are envisioned to be native and low maintenance as possible.

Several features were specifically designed to accommodate special events and functions.

Community Fire Circle

The plan shows a space that can host periodic or seasonal events for a small group of larger scale event. The circle is located along a trail and supports a quiet reflective seating location adjacent to the large pond. The design illustrates a fire ring and a small set of boulders as seating in the existing natural setting. The scale is an accurate size and configuration to support small gatherings yet respects its location within the park's ecology.

Community Garden

In keeping with the spirit of community sustainability, a location south of the Public Works facility and equipment yard provides a unique location for permanent public garden space. The space is illustrated with 20-30 garden plots for local residents use. The site is uniquely situated to benefit from compost materials and protective fencing adjacent to the municipal yard. Care should be taken during detailed design to ensure screening from the adjacent church as possible.

new FEATURES

Native American Garden and Cultural Resources

The garden is located in an accessible yet quiet location along the loop trail. The location is significant in that it can respond and support ceremony and events that would be facilitated from the Commons. Close proximity reflects a physical tie to the increasingly prominent philosophic relationship the community is embracing regarding its Native American heritage. This garden would be sculpted out of the existing willow grove and care would be necessary to prune existing vegetation. The ground surface would be designed to care for the adjacent wetlands and sensitivity of that landscape. The garden is scaled to accommodate occasional public ceremony while providing an adequate space for permanent fixtures of sculpture, mural and graphic art that describe the native peoples indigenous to Yachats region. It is important and necessary to engage the local tribe(s) for input and advice when beginning detailed design of this space.

Skate Park

As mentioned, Skate Park has been located north of the picnic shelter to serve the needs of local riders. This area is important as it is accessible directly to the Commons based teen activities and programs; yet distinct and separate from the younger children's play areas. The location is accessible for public use yet is still prominent enough to ensure a measure of visual security. The scale has been designed large enough to offer an effective and enjoyable sampling of trick components and specialized equipment. By design is small enough to anticipate a modest construction budget. The park will not be considered a full-scale facility to support skate events and professionals. During the planning, there was minor discussion regarding the attributes and potential of a climbing wall. The wall has not been illustrated on this plan; however, it is recommended if or when appropriate, a wall would fit within the skate park area and provides

a mutually desirable and safe location for these activities.

Fitness Loop Trail

As mentioned, paths and trails a popular and valuable to the community. The loop trail provides an additional experience to an individual's interpretation and relationship with the natural environment. The loop trail is designed to be a 1/4th mile in length to assist adult fitness, jogging and exercise regimes. The loop is also designed to serve walkers and includes interpretive stations or specific points along the route to place markers that graphically describe important natural and cultural features. As demonstrated by existing paths, a combination of elevated and gravel paths will be required with new construction to provide protection to the park's ecology. Considerable effort should continue to introduce interesting natural site features along the way, including the large spruce trees, meadow and wetlands. Way-side spots to pause include an elevated tree platform, the existing bird stand, the proposed Native American garden and confluence with the new beach access and west entry court that features marine and ocean interpretive displays.

Sunday Market

The current Market is located along the east and north front of the Commons building clearly visible from Hwy 101. The location is significant in that it can accommodate and support activity including restrooms from the Commons building. Unfortunately, the open sidewalk location affords limited protection from weather and offers little space for safe high-volume access and expansion. The was discussion regarding the merits of increasing utilization of the improved Picnic Shelter Pavilion to serve a greater set of vendors and offer additional weather protection. This effort was projected to be feasible and could be welcomed over time. Current habits sense the need to maintain a 'drive-by'

relationship to Hwy 101 to maintain the public interest. Improvements to assist in a transition toward greater use of the Pavilion included enhancements to the City marquee and event signage. Additional signs would maintain visibility from Hwy 101; yet move vendors, vehicles and pedestrians toward the west portions of the Commons grounds.

Organic Waste Recycling

The plan includes exploring an opportunity to collect and mulch organic yard waste from local residences. Current practice is to burn or haul yard debris to Waldport. Both choices are difficult for those without proper vehicles and seniors. The proposed facility at 6th street provides a convenient location for to place compartments for drop-off and pick-up of materials. One space is for raw leaves, clippings, brush and green material, the second provides separate space to collect and dispose of invasive species of vine, shrub and berry plants. Situated in a location next to the community garden affords close oversight by Public Works. In coordination with Public Works, this facility will need to care for sites and smells adjacent to the church.

Memorials

There is increasing desire to remembering a friend or family member through placement of a public marker. This plan recognizes a limit to the park's capacity to add benches, plaques and markers. While the process and function of memorials is deemed important, it is recommended that each of the plan's components from entry courts, benches, furnishings and even plantings be recognized as potential memorials. Each component of the plan will be achieved only as resources dictate so embracing the park's features as a 'menu' from where memorial selections can be made provides a service to the community. In addition, the plan provides the Common's Commission with a set of choices they can evaluate with each request based on their priorities.

Art

There is considerable local talent and interest in including public art in the park. It is also prudent to recognize style and taste of art and sculpture is very subjective even if the artist and subject is embraced. It is strongly recommended that prior to beginning each new development of the plan's components, a discussion of appropriateness is included. It is important to understand art can be incorporated into the design of the furnishings rather than simply serving in the traditional role as a piece to-be-viewed. Art and graphics can be attractively and tastefully designed as benches, arbors, wind vanes, and solar collectors. Art can be attractive in plantings, screening and fence design. As demonstrated in National Parks, interpretive displays and educational boards can successfully incorporate graphic art and information from history, culture and ecology.

As example, there was considerable discussion regarding screening of the Public Works facility. The plan includes a series of plantings in addition to art in the form of sculpture or murals that might be placed on or along the existing fences. It is critical to recognize that taste, subject and content changes over time. Each installation should be located and placed with construction methods that provide periodic and accessible removal. It is recommended the Parks and Commons Commission develop a small yet representative board of individuals that can objectively select a palette of site graphics and art similar to and complementing the park's plant materials and structures. This will provide a tool to guide and review the value each piece prior to selection.

Common's Park General Plan - Cost Estimate 2011

Assumptions:

1. The General Plan has been designed specifically as a series of "sub-projects" to simplify and manage incremental (not-all-at-once) budgets and priorities.
2. Each sub-project contributes to the whole but can be funded, built and maintained independently as the Commission deems appropriate as resources become available.
3. Individual Site and Building Improvements may require detailed design, not included in these estimates, when necessary, design should be added at 8-12% of construction.
4. Site and Building Improvements such as foundation plantings are considered maintenance and should follow the plant selection palette but not require detailed design.

Site (landscape & grounds) Improvements:

1. When feasible, it is assumed that Public Works staff will perform the primary clearing, grading and soil prep with each sub-project.
2. It is assumed that wetland and watercourses will be reviewed (if/as required) prior to each project to determine avoidance or mitigation by design.
3. It is assumed that existing plantings, benches, memorials and structures will be reviewed prior to each project to determine avoidance, relocation or mitigation by design.
4. It is assumed that new landscape improvements will be non-irrigated and the minimum number of plantings required for aesthetics and screening.
5. Where ever feasible, it is assumed that Public Works staff will perform the maintenance and that specialty equipment and exotic species are avoided during design.

Facility (buildings construction and maintenance) Improvements:

1. It is assumed all new construction will incorporate ADA requirements and cultural resource review during design.
2. It is assumed the design of new improvements or maintenance includes review of existing materials (roofing, siding, windows, fencing) and the color palette.
3. Where ever feasible, it is assumed that Public Works staff will perform maintenance and that specialty equipment or construction practices are avoided during design.

Entry Courtyards (north, south, east west):

A series of "Entry Courtyards" have been located at the North, East, South and West entries to the property. Detail designed for each court will include slightly different characteristics tied to the features at that location. This budget assumes each Entry Court will include a similar set of components, plantings and construction costs.

Whale Park

Whale Park is a pocket park located on the east side of Hwy 101, south of the highway's intersection with Prospect Avenue. Whale Park totals approximately 3,500 square feet and features the Spouting Whale sculpture. The sculpture is timed to spout water, providing an attraction and amenity to residents and visitors.

Plans are to maintain this park with the sculpture and landscaping. Hwy 101 improvements, including a sidewalk and on-street parking, are planned for the future.

Location

At the northern edge of the City of Yachats. The park is located west of Highway 101 along the shoreline.

Size: 8.7 acres

Classification

State Recreation Site – the primary purpose of parks in this classification is to provide recreational resources and access to them.

Description

Smelt Sands is well known for the section of the 804 Trail that runs through the park, connecting Yachats to the beach north of the City. The half-mile trail segment follows along the edge of a spectacular section of rocky coastline, passing private residences and several hotels located on the eastern park boundary before sloping down to the beach. There is a restroom and gravel parking

lot at the south end of the park. The park can also be accessed on foot via the 804 Trail from Yachats. This segment of the 804 trail is popular with tourists and locals for walking, dog walking, photography, exploring tidepools, and ocean viewing, among other activities.

Existing Recreation Facilities

- Unpaved Day Use Parking (16 spaces)
- Plumbed Restroom
- Gravel and Soft Surface Trails

Visitation

Estimated total visitation to the park in 2014 was about 294,000, however, that number does not account for pedestrians who accessed the park via the 804 Trail or users staying in the hotels and rental properties along the trail. The overall trend between 2002 and 2014 was of increasing visitation, from less than 150,000 visitors in 2005 to around 300,000 visitors in 2011, 2012, 2013, and 2014.

Botanical Resources Assessment

Areas adjacent to roads, parking, and trails within the park are generally in poor to moderate ecological condition, while the rocky shores as well as scattered patches of forested and shrubby habitat are in good condition. Vegetation in the park is diverse, with varied habitat types located along the 804 Trail, including shore pine and Sitka spruce forest, native shrublands, willow shrubland, upland grasses, marshlands, and dunes stabilized by European beachgrass. Invasive species are widespread along the trail and entrance road, and include English ivy, escallonia, Himalayan blackberry, montbretia, reed canarygrass, European beachgrass, tansy ragwort, and yellow flag iris.

Forestry Resources Assessment

Forest resources in the park were not assessed.

Cultural Resources Assessment

Land for the park was acquired in the early 1970s and in 1990. This area of Yachats was the location of the Alsea Sub-agency, a temporary reservation for coast Indians who were waiting for the Coast Reservation Treaty to be ratified, which never occurred. The Native Americans here were later moved to the Siletz Reservation. The historic 804 Trail probably first served as a footpath for native people, later becoming part of County Road 804, which included the 7-mile stretch of beach between Yachats and Waldport. County Rd 804 served as a route of travel for settlers between the farmland of

the upper Yachats River valley and Waldport's Alsea Bay until the completion of the Coast Highway in the 1930s.

The three-quarter-mile section of the 804 Trail within the park was the subject of a long legal battle in the 1970s to have the trail vacated. Oregon's high court finally ended the argument with a ruling in the mid-1980s that this portion of the trail would remain as public right-of-way.

Interpretive Assessment

The park contains interpretive elements and programming, including guided hikes along the 804 Trail, special events, and interpretive signage.

Development Suitability

Most areas surrounding the trail, parking lot, and entrance road are designated low or moderate resource value and conservation priority on the Composite Natural Resource Value Map (Figure S13-B) and are therefore potentially developable from a natural resource perspective. There are significant other constraints to development along the trail, however, including scenic impacts, limited space, and its cultural resource value. The rocky shoreline is protected as part of the Cape Perpetua Marine Protected Area.

**High conservation priority in wetland areas.

Issues

- The park includes the most popular segment of the 804 Trail and has seen increased use over the last decade. Capacity does not seem to have been reached but could become an issue in the future.
- The gravel entrance road and parking lot have frequent potholes and present a maintenance challenge.
- The hotels along the trail assist with maintenance of the trail in the southern portion of the park.
- The beach access at the north end of the park has problems with erosion, like many beach access trails in parks within the management unit.

Recreation Needs

- Improved 804 Trail access from the parking lot
- Improved beach access

Maintenance Needs

- Improved road and parking lot

Development Concept

- Pave the entrance road and parking lot.
- Construct ABA path from the parking lot to the 804 Trail
- Improve beach access at the north end of the 804 Trail.

Natural Resource Management Actions

- Control populations of English ivy, montbretia, yellow flag iris, old man's beard, Japanese knotweed, and Himalayan blackberry.
- Encourage appropriate tide-pool etiquette and coordinate with ODFW to manage and protect rocky intertidal ocean shore resources within the Cape Perpetua Marine Protected Area.
- Reduce disturbances to nesting black oystercatchers.

Existing beach access at the north end of the 804 Trail

FIGURE S13-A – Existing Conditions Map

Location

In the center of the City of Yachats. The park is located west of Highway 101 at the intersection of 2nd Street and Ocean View Drive.

Size: 93.3 acres

Classification

State Recreation Area – the primary purpose of parks in this classification is to provide recreational resources and access to them.

Description

The park provides a scenic viewpoint looking out over the ocean and across the mouth of the Yachats River to the forested peaks of Cape Perpetua. There is a viewing platform as well as a trail down to a small sandy beach and areas of rocky shoreline at the base of

the bluff. Facilities include parking, benches, a restroom, and a segment of the 804 Trail along the bluff.

Existing Recreation Facilities

- Paved Day Use Parking (48 spaces)
- Plumbed Restroom
- Gravel and Soft-Surface Trails

Visitation

Estimated total visitation to the park in 2014 was about 568,000; however, that number likely includes some vehicle through-traffic on Ocean View Drive. It also does not account for pedestrians who may have accessed the park via city streets or the 804 Trail. The overall trend between 2002 and 2014 was of increasing visitation, with a low of 350,000 estimated visitors in 2003 and more than 550,000 visitors in 2013 and 2014.

Botanical Resources Assessment

Areas adjacent to the parking lot park are mostly in poor to moderate ecological condition, while the beach and rocky shores are in good condition. Vegetation in the park consists of several stands of Sitka spruce surrounding the parking lot, as well as a remnant patch of camas meadow next to the county road. Camas meadow habitat was widespread in this area prior to the arrival of Europeans but is now very rare along the coast. Many invasive plant species are present, including bull thistle, English ivy, escallonia, Himalayan blackberry, montbretia, reed canarygrass, and tansy ragwort.

Forestry Resources Assessment

Forest resources in the park were not assessed.

Cultural Resources Assessment

Land for the developed portion of the park was acquired in 1928 in order to preserve the site for salmon and steelhead fishing, provide public access to the small sandy beach, and control removal of sand for commercial uses. An observation platform and restroom were constructed in the 1930s.

Interpretive Assessment

There are three interpretive signs located throughout the park focusing on geology, tidepools, and local history.

Development Suitability

Outside of the currently developed area, the stands of Sitka spruce surrounding the parking lot area designated moderate resource value and conservation priority on the Composite Natural Resource Value Map (Figure S14-B) and are therefore potentially developable from a natural resource perspective. The small remnant camas prairie adjacent to the road is designated high resource value and conservation priority and should be protected from development. The rocky shoreline is protected as part of the Cape Perpetua Marine Protected Area.

Issues

- There are significant erosion issues along the edge of Ocean View Drive that have impacted portions of the 804 Trail, which lies along the bluff edge of the road.
- Ocean View Drive itself is also threatened by erosion and may need to be moved farther east. The road is maintained by Lincoln County; if the road needs to be moved, OPRD will work with the County to minimize impacts to park property. In particular, there is a rare, remnant patch of camas meadow located along the east side of the road that should be protected from development if possible. If the road needs to be moved more than a few feet beyond the existing right-of-way, it may be worth exploring alternative alignments utilizing park property that would protect the camas habitat.

FIGURE S14-A – Existing Conditions Map

Recreation Needs

- Improve 804 Trail sections impacted by erosion

Maintenance Needs

- Replace restroom

Development Concept

No significant new development is proposed at this park.

ORPD should work with the City and County to manage the impact of erosion on the 804 Trail and Ocean View Drive. If relocating the road becomes necessary, efforts should be made to minimize the impact on natural and recreational resources in the park.

Natural Resource Management Actions

- Maintain and enhance wet prairie habitat and camas population.
- Control populations of English ivy, montbretia, yellow flag iris, old man's beard, Japanese knotweed, and Himalayan blackberry.
- Encourage appropriate tide-pool etiquette and coordinate with ODFW to manage and protect rocky intertidal ocean shore resources within the Cape Perpetua Marine Protected Area.
- Mow developed areas of park with wildlife in mind.
- Reduce disturbances to nesting black oystercatchers.

Remnant wet prairie camas habitat along the eastern edge of Ocean View Drive

FIGURE S14-B – CNRV Map

Location

Just south of the Yachats River, within the City of Yachats. The park is located west of Highway 101 along Yachats Ocean Road.

Size: 79.0 acres

Classification

State Natural Site – the purpose of parks with this classification is to protect important ecosystem components and provide public interpretation and education.

Description

The park is composed of a thin strip of forested bluff next to, and including, Yachats Ocean Road, as well as rocky shoreline to the south, and beach that extends north to the mouth of the Yachats River. There is parking along the road and a short trail down

to the beach. A small picnic area is located above the rocks at the southern end of the beach. The primary draw is the beach at the mouth of the Yachats River, which is popular with dog walkers, beachcombers, and others, tourists as well as Yachats residents. The setting, which encompasses the shoreline, beach, river mouth, steep forested mountains, and the picturesque town of Yachats in the background, is memorable to say the least.

Existing Recreation Facilities

- Paved Day Use Parking along Road (61 spaces)

Visitation

Estimated total visitation to the park in 2014 was about 233,00. The overall trend between 2002 and 2014 was of increasing visitation, from approximately 180,000 visitors in 2002 and 2003 to more than 230,000 in 2013 and 2014.

Botanical Resources Assessment

Areas along the road are generally in poor to moderate ecological condition. Vegetation in the park is limited to a narrow strip between the road and the beach. Forested areas are primarily Sitka spruce, with a minor component of Western hemlock. Other vegetated areas along the road consist of shrubland, shrubby wetland seeps, and grasses. Invasive plant species are widespread, and include English ivy, Himalayan blackberry, montbretia, everlasting peavine, and Japanese knotweed.

Forestry Resources Assessment

Forest resources in the park were not assessed.

Cultural Resources Assessment

The property was given to the state over the period of 1931 to 1962 by several donors, including Lincoln County. The park protects natural resources and public access at the mouth of the Yachats River, as well as the scenic road along the shoreline.

Interpretive Assessment

There is no interpretive programming or signage in the park.

Development Suitability

Most of the land along the west side the road is designated high resource value and conservation priority on the Composite Natural Resource Value Map (Figure S15-B). A narrow strip of grass along the east side

of the road is designated low resource value and could potentially be developed, most likely for placement of the road in the event that it needs to be moved back from the edge of the bluff. Additional recreational development in the park is restricted by the lack of available space and by the park's designation as a natural site. The rocky shoreline and beach are protected as part of the Cape Perpetua Marine Protected Area.

Issues

- There are erosion issues along the edge of Yachats Ocean Road. The road will likely need to be moved back from the bluff edge in one or more locations in the future as erosion continues.

Recreation Needs

- None identified

Maintenance Needs

- Repair erosion along the road as needed

FIGURE S15-A – Existing Conditions Map

Development Concept

No new development is proposed at this park. When needed due to continued erosion, work with the City and County to accommodate changes to Yachats Ocean Road Alignment.

Natural Resource Management Actions

- Eradicate Japanese knotweed.
- Encourage appropriate tide-pool etiquette and coordinate with ODFW to manage and protect rocky intertidal ocean shore resources within the Cape Perpetua Marine Protected Area.
- Reduce disturbances to nesting black oystercatchers.

Yachats Ocean Road, looking northeast toward the beach access

FIGURE S15-B - CNRV Map

Evans-Betz Property

The Evans-Betz property is located south of the Yachats River on the east side of Hwy 101. The 28-acre property includes over one-half mile of Yachats River frontage. There are two fish-bearing tributaries traversing the property that flow into the river. The site is heavily wooded with a mix of conifers and deciduous trees, shrubs, and riparian vegetation located along the river and stream frontages.

The natural resources of the property, combined with the close proximity to the Yachats commercial and residential areas, make it an ideal candidate for preservation as open space, protection of natural resources, and public pedestrian access for recreation and interpretive purposes that benefit both the Yachats community and visitors.

Southeast Viewshed

The Southeast Viewshed is the forested mountainside that is a dominant feature of the Yachats landscape, located southeast of Yachats. This viewshed, when combined with views of the Pacific Ocean and Cape Perpetua, creates the incredible natural beauty and setting that makes Yachats such a special place. Acquisition of the Southeast Viewshed as public open space will preserve the forested mountain and outstanding setting.

East Hillside Watershed

The East Hillside Watershed is located on and over the ridge on the east side of Yachats, just outside the city limits and urban growth boundary. This watershed includes Reedy Creek, which is the primary water source for the City of Yachats. Portions of the watershed have been logged, which threatens the quality of the watershed, creek and domestic water source. Acquisition of the watershed would allow for preservation of the forest, protection of the watershed and creek, and public trails for use and enjoyment by the Yachats community and visitors.

To: Kimmie Jackson; Craig Berdie
Subject: Common's Park Space

Commenting on Craig's plans for the area behind the Commons. Here are my thoughts.

- 10% Labyrinth and area for contemplation/meditation
- 70% An amphitheater-type of arrangement for seating as well as having gatherings for presentations. I would like to see placards/signage interpreting the history of the tribes that use to inhabit this area. Could also include plants used by the indigenous people.
- 20% Fire pit built into the ground with a seating bench all around it.

Perhaps a trail going along 6th street to the back area near the wetlands and meandering around toward the Pavilion and over to the skate park area. This could also include interpretive signs to explain the history of the Commons as a school and community center.

I am not in favor of a dog park on this very limited green space. I also do not want a fenced area designated for children. Any closed off, fenced in area just limits the option for other uses. No timber house. I want the majority of the land to be flexible green space where uses can change over time.

Thank you,
Linda

Subject: Next meeting date/ Dawn's votes

Hi everyone!

As anticipated, the council did approve our change of meeting time, so our one and only March meeting time is MARCH 2 at 2pm. Please get things for this meeting to Kimie as quickly as possible (preferably Monday or Tuesday) as the end of the month is very busy at the city offices!! Thanks so much!

Here are my votes for the open space:

A flexible community gathering space that can be used as both a mini amphitheater or a fire circle. 50%

A large central open space for outdoor recreational use with benches and/or tables scattered around the perimeter.
50%

Dawn
